

# ABSTRACT

A yellow dye-forming coupler represented by formula (I):

formula (I)

5

wherein Q represents a group of nonmetallic atoms that form a 5- to 7-membered ring in combination with the -N=C-N(R<sub>1</sub>)-; R<sub>1</sub> and R<sub>2</sub> each represent a substituent; R<sub>4</sub> represents an alkyl group; m represents an integer of 0 to 4; and X represents a hydrogen atom, or a group capable of being split-off upon a coupling reaction with an oxidized product of a developing agent; and when R<sub>4</sub> represents a primary alkyl group, R<sub>1</sub> represents -(CH<sub>2</sub>)<sub>3</sub>O-R<sub>101</sub> in which R<sub>101</sub> is an alkyl group having 4 to 8 carbon atoms. A silver halide color photographic light-sensitive material having at least one yellow dye-forming coupler represented by formula (I) in at least one layer provided on a support.
